CASE STUDY

A Global nonprofit organization focused on securing data using Cybersecurity Solutions with SharkStriker's SIEM Service.

The client is a learning nonprofit organization in the USA. They are focused on providing education, child care, leadership, swimming, sports, play, health, and well-being. Additionally, they have 27+ locations with over hundreds of users per location to protect. The aim of the company is to serve a large community. The organization is highly active in implementing technology services to enhance customer experience. Believer in secured data, the organization is solely focused on establishing and promoting best practices to ensure that data compromise doesn't occur.

Apart from consistently making a positive impact across communities, the organization is well aware that the best methods for addressing IT security issues are protection, awareness training, periodic assessment. However, in the past, they have experienced several data-related issues such as security and theft. Therefore, the organization was seeking prominent cyber security services that could deliver end-to-end cybersecurity services.

Challenges

The major pain point was to protect the data from threats and theft. As the cases of data breaches are consistently increasing, the dire situation of cybersecurity arises. The client was experiencing hacking activities. Also, being a nonprofit the chances of hacking is high, because the criminals have higher chances of making a profit from the nonprofit organization. The following were lacking which was essential to protect the data of this nonprofit organization.

No means to invest in cyber security and IT infrastructure makes it challenging to keep the data for a longer period of time.

For compliance concerns, the organization was utilizing SIEM logging and reporting products, but they weren't satisfied with it because it only provided rudimentary data. The following are the main difficulties encountered when offering SIEM service to the organization.

CASE STUDY

1. That was only a tool, and it had very little visibility and very little threat detection.

2. The tool needed installation and management, but the customer lacked an internal team to handle it.

3. The customer lacked a 24/7 Security Operations Center (SOC) to track threats and respond to various situations.

4. They intended to fulfill compliance obligations.

Solution

To enhance the security posture of the poster, SharkStriker was surely the right cybersecurity partner for the client. Being a prominent SIEM service provider, we ensured our clients receive on-demand SIEM service helping detect threats and remediate issues 24*7*365. To replace the traditional security system, and legacy security installation it is inevitable to apply SIEM as a service.

SharkStriker SIEM-as-a-Service comes with a fully hosted cloud-based SIEM solution, and a highly matured modern 24/7 Security Operations Center (SOC). This solution addressed the core requirements of customers to have better visibility and better compliance. On top of that, the service comes along with a 24/7 SOC team consisting of Threat Hunters, Incident Responders, and Threat Researchers to do proactive threat detection to prevent any potential threat or breach and provide unlimited incident response service.

We provided end to end SIEM services to our client so that client can achieve following results for his business. With our fully managed SIEM, the organization receive the following benefits:

- Machine-accelerated proactive threat hunting.
- Backing from a 24/7 SOC team for round the clock monitoring.
- File integrity monitoring, host vulnerability assessment, and CIS benchmark baseline assessments.
- Easy-to-use dashboards with updated data sets for actionable insights and weekly/monthly reports.
