

# SharkStriker

Expert In World-class Cyber Security Solutions  
Strengthen Your Cyber Security Infrastructure With  
Managed Security Services

## **SharkStriker VS Huntress**

## Features

## SharkStriker

## Huntress

### 1. Whitelabel Partnership

- ✓ End-to-end whitelabeling of the entire service portfolio, enabling partners to brand and resell MDR, ITDR, and compliance solutions as their own. Includes customizable dashboards, reports, and client-facing tools for seamless integration.

- ✓ Limited whitelabeling options, primarily focused on endpoint security services. Lacks comprehensive branding across a full cybersecurity portfolio.

### 2. Pricing & Partner Margins

- ✓ Competitive, flexible pricing designed to maximize partner margins. Transparent pricing with tailored plans to fit diverse client needs, ensuring high profitability for MSPs and resellers.

- ✓ Competitive pricing for SMBs, but less optimized for partner margins in complex or multi-tenant environments. Higher costs for scaling services.

### 3. Platform Architecture

- ✓ Multi-tenant, open-architecture platform with seamless integration across cloud, on-premises, and hybrid systems. Supports a wide range of third-party tools for maximum flexibility.

- ✓ Focused on endpoint protection with strong integrations but limited flexibility for complex, multi-tenant environments.

### 4. Threat Detection & Response

- ✓ 24/7 human-led threat hunting with AI-driven analytics, providing proactive identification and response to advanced threats, including zero-day exploits and insider threats. Offers tailored remediation plans.

- ✓ 24/7 human-led threat hunting with a focus on endpoint detection and response (EDR). Effective for known threats but less emphasis on proactive hunting for emerging threats.

### 5. Identity Threat Detection

- ✓ Comprehensive Identity Threat Detection and Response (ITDR) with advanced monitoring for Microsoft 365, VPN, and location-based anomalies, ensuring robust protection against business email compromise (BEC).

- ✓ Managed ITDR for Microsoft 365 with detection for BEC, but less comprehensive coverage for non-Microsoft environments.

### 6. Ease of Use

- ✓ Intuitive interface with customizable, whitelabeled dashboards, enabling both technical and non-technical staff to manage security events. One-click remediation with detailed reports.

- ✓ User-friendly with one-click remediation and handwritten incident reports, but primarily designed for non-security staff, limiting advanced customization.

### 7. Scalability

- ✓ Built for businesses of all sizes, with scalable pricing and deployment options. Ideal for MSPs and enterprises with complex, multi-client needs.

- ✓ Best suited for small to mid-sized businesses (SMBs). Less scalable for large enterprises or MSPs.

### 8. Compliance Support

- ✓ Comprehensive compliance management for GDPR, HIPAA, PCI-DSS, and more, with automated, whitelabeled reporting and audit-ready documentation.

- ✓ Limited compliance-specific features, with a focus on endpoint security rather than broad regulatory support.

### 9. Customer Support

- ✓ Dedicated 24/7 support with personalized onboarding, continuous monitoring, and direct access to cybersecurity experts for tailored, whitelabeled guidance.

- ✓ 24/7 support with a dedicated threat hunting team, but response times and personalization may vary for complex issues.
